Monthly Newsletter from the leader in sandbox software for DevOps and Cloud Automation

As enterprises and service providers commit to digitization efforts at a faster pace, ensuring the productivity of teams, efficiency of resources and cost control are top of mind. IT environment complexity can muddy the most well thought out digitization initiatives. This is where Quali is quietly providing self-service, on-demand sandboxes, which some rightfully point out as the “Netflix of IT environments”. Dev/Test teams undertaking DevOps, App Modernization, Certification, Compliance, Cloud Migration and more – all benefit from this approach. Our next two webinars are focused on this aspect, taking two different use-cases, one focused on AWS cloud migration and the other around sales engineering demos. If you have a digitization initiative underway, consider giving Quali a look up.
